Evaluation and Criteria

1 Problem & Opportunity

2 Business Value

3 Impact & Outcomes

4 Feasibility & Scalability

5 Proposal Quality

One Clear Business Story

- 1 What problem are you solving?
- 2 Who experiences it — and why does it matter?
- 3 What business value will the Agent create?
- 4 What measurable outcomes do you expect?

The key mindset

**Think like a
business owner,
not just an
AI developer.**

Problem and Opportunity

Define a meaningful problem

Who & what

- Target users / stakeholders
- Current task or process
- Specific pain points

Why it matters

- Frequency or scale
- Operational/business consequence
- Why solving it is worthwhile

Current Situation

- Evidence from the SME (based on assumption)
- Current workflow / journey

Avoid: “We want to build an AI chatbot.”

Prefer: “Staff repeatedly search multiple sources to answer routine enquiries, creating delays and inconsistent responses.”

Business Value

Explain how the Agent(s) creates value in your business use cases

Productivity

Fewer manual steps / staff hours

Cost

Lower cost per transaction

Revenue

More leads, conversions or sales

Service

Faster, more consistent
experience

Risk

Fewer errors / better controls

Scale

Handle more volume without
matching headcount

Business Impact & Outcome

Define measurable impact

A business success metric is a measurable indicator used to determine whether a strategy is achieving its intended goals. Also known as a **Key Performance Indicator (KPI)**, it helps teams track progress and evaluate outcomes.

Business Outcome	Example Success Metrics / KPIs
Increase sales	15% increase in monthly revenue; 10% increase in average order value
Reduce operating costs	20% reduction in administrative costs; \$2,000 monthly cost savings
Improve productivity	Reduce processing time from 30 minutes to 10 minutes; 25% more cases handled per employee
Improve customer service	Reduce average response time from 4 hours to 30 minutes; achieve 90% customer satisfaction
Generate more leads	30% increase in qualified leads; 15% increase in enquiry-to-sale conversion
Reduce manual work	Automate 60% of repetitive enquiries; save 15 staff hours per week
Improve accuracy	Reduce data-entry errors by 50%; achieve 98% order-processing accuracy
Improve customer retention	Increase repeat customers by 15%; reduce customer churn by 10%

Feasibility & Scalability

Show that it can work beyond the hackathon

Feasibility

- Data / knowledge required to maintain the solution
- Systems (cloud platform?), tools and APIs
- Human-in-loop / escalation
- Deployment and operating needs
e.g. platforms, tokens
- Risk/exposure

Scalability

- Can it support more users or transactions
- Does it support cross functional workflows / departments
- Monitoring, security & governance
- Ease of transition from prototype → pilot → production

Proposal Quality

Make the proposal easy to judge

CLEAR

Easy for a business stakeholder to understand

CONCISE

Focus on information that proves the case

EVIDENCE-BASED

Support important claims and assumptions

CONSISTENT

Problem, solution, value and KPIs connect

STAKEHOLDER-AWARE

Reflect the SME, users and operating context

Consistent Message

Your proposal and demo must tell the same story

PROPOSAL CLAIM

“The Agent reduces processing time.”

DEMO / VIDEO EVIDENCE

Show the end-to-end workflow and elapsed time.

PROPOSAL CLAIM

“The Agent reduces manual steps.”

DEMO / VIDEO EVIDENCE

Show the before vs. after workflow.

PROPOSAL CLAIM

“High-risk decisions require approval.”

DEMO / VIDEO EVIDENCE

Show the escalation / human approval point.

Thank You
